Saw a picture of an example of code
NEC 300.4 (D) where a furring strip was
used and a wire was run parallel to the
furring strip. Per the code, the wire was
1 1/4" away from the nearest edge of
the furring strip. This doesn't make
sense since the wire has the same
chance of getting hit with a nail if the
wire was only 1/2" from the furring strip.
