Problems

Exponential functions tell the stories of explosive change. The two types of exponential functions are exponential growth and exponential decay. Four variables — percent change, time, the amount at the beginning of the time period, and the amount at the end of the time period — play roles in exponential functions. This article

exponential function of the form a^x is a one to one function to write.

$2x = -x^2 + 1$. Rewrite in standard form and solve the above quadratic equation. $x^2 + 2x - 1 = 0$. $\Delta = 2^2 - 4(1)(-1) = 8$. Two solutions: $x_1 = -1 - \sqrt{2} \approx -2.41$ and $x_2 = -1 + \sqrt{2} \approx 0.41$.

k so that $f(1) = 1$ and $f(2) = 2$, where f is an exponential function given by $f(x) = A e^{kx}$
Solution to Question 2.
Use the fact that $f(1) = 1$ to obtain $1 = A e^k$;
Now use $f(2) = 2$ to obtain $2 = A e^{2k}$;
Rewrite the above equation as $2 = A e^k e^k$;
Use the first equation $1 = A e^k$ obtained in the first step to rewrite $2 = A e^k e^k$ as $2 = e^k$

Exponential Functions Questions with Solutions

Exponential growth is modeled an exponential equation. The population of a species that grows exponentially over time can be modeled by. $P(t) = P_0 e^{kt}$. $P(t) = P_0 e^{kt}$ $P(t) = P_0 e^{kt}$

Exponential growth occurs when a function's rate of change is proportional to the function's current value.

Whenever an exponential function is decreasing, this is often referred to as exponential decay. To solve problems on this page, you should be familiar with rules of
