solution For all solutions, let T_1 be the cable on the left and T_2 be the cable on the right. The sign always has weight (W), which points down. The sign isn't going anywhere (it's not accelerating), therefore the three forces are in equilibrium.

In Physics, equilibrium is the state in which all the individual forces (and torques) exerted upon an object are balanced. This principle is applied to the analysis of objects in static equilibrium. Numerous examples are worked through on this Tutorial page.

If the problem is not solved directly from the physics, then, • use the method of joints to solve for the unknowns if they are near a known force that can be used in the solution. • use the method of sections to solve for the unknowns if they are not near a known force that can be used in the solution.

Mechanics can be subdivided in various ways: statics vs dynamics, particles vs rigid bodies, and 1 vs 2 vs 3 spatial dimensions. Thus a 12 chapter mechanics table of contents could look like this I. Statics A. particles 1) 1D 2) 2D 3) 3D B. rigid bodies 4) 1D 5) 2D 6) 3D II. Dynamics C. particles 7) 1D 8) 2D 9) 3D D.

Statics is a branch of

mechanics which studies the effects and distribution of forces of rigid bodies which are and remain at rest. In this area of mechanics, the body in which forces are acting is assumed to be rigid. The deformation of non-rigid bodies is treated in Strength of Materials.. Topics in Statics: Resultant of Force System

Statistics problems take on a wide range, from pie charts, bar graphs, means, and standard deviation to correlation, regression, confidence intervals, and hypothesis tests. To be successful, you need to be able to make connections between statistical ideas and statistical formulas.
